DASSAULT AT

Talento EFT Terminal

A streamlined transaction flow

Talento's intuitive transaction flow is a product of Dassault's worldwide EFT and EP experience. For example, the swift speed of Talento's thermal printer insures that you never wait for printing, with the customer receipt available in approximately one half second after approval. The large backlit multi-line display, ATM-like screen addressable keys and simple to follow menus lead inexperienced operators through any transaction, confidently. Bright blue hot keys provide a merchant access to functions in a single keystroke, saving time and eliminating frustration.

Superior technology

Helping all this happen is a powerful multi-tasking application running inside Talento. Talento's multi-tasking application reduces merchant and operator wait time by performing transaction tasks such as pre-dialing at the swipe of the credit card, printing during transaction authorization, and receipt printing as your customer is signing the merchant copy. The retail/restaurant solution offers credit, debit, EBT, check authorization and smart card acceptance, all in one application. With Talento's multi-tasking technology, form follows function.

Customer and merchant security is paramount

Customers and merchants are at ease when they use Talento. When doing ATM debit or a transaction involving PIN entry, Talento offers either an integrated or handheld PIN pad that meets all domestic and international security standards. The big bright screen, simple keyboard, and contoured ergonomic design reduce entry errors and promote ease of use. When people are comfortable in using a product they are more confident and secure.

Adapting to changes in customer payment preferences

An EFT terminal must adapt to changes in customer payment preferences. Talento protects the merchant's investment through its memory upgrade, smart card availability, and ability to interface peripherals such as check readers, scanners, keyboards, and other elements as your needs dictate.

Technical Specifications

- 16 bit microprocessor
- Multi-tasking operating system
- 88 backlit character display
 - 5 line display
- Graphics display and print capabilities
- 25 key keyboard
 - 5 "hot" function keys
 - 3 screen addressable keys
- Secure integrated or external PIN pad available
- Optional smart card reader
- 7 line per second thermal printer
- Holds up to 4 optional Security Access Modules (SAMs)
- Track 1&2/2&3 magnetic stripe reader
- 2400/1200 bps modem
- RS-232 port for check readers, keyboards, etc.
- RS-485 port
- Up to 4.5 MB memory
- Over 1,500 transactions storage capacity
- Software packages:
 - x 8
 - Minor guardware
 - Multi-dial
 - E-Z ware
 - Recurring credit
 - Truncation
 - Phone card
 - Logo
